# Stocks of Grains

January 25, 1957  
3:00 P.M. (E.S.T.)

in All Positions

UNITED STATES STOCKS

JANUARY 1, 1957

CORN AND SOYBEAN STOCKS CONTINUE AT RECORD LEVEL

January 1, 1957, stocks are a record for January 1 for corn and soybeans. Corn stocks of 3.4 billion bushels and soybean stocks of 330 million bushels exceed the previous record by 11 and 20 percent, respectively. Stocks of feed grains -- corn, oats, barley, and grain sorghum -- add to a total of 121 million tons -- the largest in the 12 years for which comparable data are available.

Stocks of 1,487 million bushels of wheat stored in all positions on January 1 were the second largest for the date in the comparable series beginning in 1935. The total is 5 percent smaller than the record holdings a year earlier but 54 percent larger than the 1946-55 average. The stocks total was nearly 50 percent larger than the 1956 production, reflecting the record large carryover of old wheat on July 1, a large part of which was Government-owned, but reflects the first decline in total stocks from the previous year for any quarter since 1952. Current stocks are less than October 1, 1956 stocks by 310 million bushels or nearly a fifth smaller and reflect the largest disappearance during the quarter (October-December) since 1948.

Off-farm wheat stocks of 1,195 million bushels are 4 percent less than a year earlier, with holdings below the previous year for all positions except terminals. Terminal stocks are a record for the date with merchant mill stocks only slightly below the fairly high level of the previous year. Of the off-farm total, nearly two-thirds was either owned by the Commodity Credit Corporation or was warehouse-stored wheat under Government commodity loans.

Rye stocks of 19.1 million bushels in all positions on January 1 were the smallest since 1953 and 33 percent less than stocks a year earlier. Farm stocks of rye totaled 7.3 million bushels, 47 percent less than a year earlier, and accounted for about one-third of the total stocks. Stocks of rye at interior mills and elevators reported at 3.5 million bushels were the smallest since 1953 and only about one-half the large stocks in these positions a year ago. Stocks at terminals of 8.3 million bushels were only slightly less than stocks January 1, 1956, while holdings in CCC bins were quite small. Stocks on farms and interior mills and elevators accounted for about 56 percent of the total stocks.

Stocks of corn in all storage positions on January 1 are estimated at 3,416 million bushels -- exceeding the previous record a year ago by 11 percent. Of the total stocks, 68 percent were on farms, an increase of 116 million bushels from a year ago. Quantities in CCC-owned bins at 670 million bushels were up 87

million bushels. Stocks in interior mills, elevators, and warehouses at 322 million bushels were 109 million above January 1 last year and terminal stocks, at 94 million bushels, increased 22 million. Corn under loan to or owned by CCC accounted for 36 percent of current stocks compared with 30 percent on January 1, 1956. From the October 1 supply of 4,247 million bushels, disappearance during the October-December period is indicated at 830 million bushels compared with 836 million bushels during the same period a year earlier.

Oats stocks of 786 million bushels were lowest for January 1 in 9 years and a fourth less than the near-record stocks of January 1, 1956. Stocks on farms, at 696 million bushels, were 245 million less than a year earlier and stocks in off-farm positions at 89 million bushels were 12 million less. Disappearance of oats since October 1 of 265 million bushels was 8 percent less than in the same quarter a year earlier although about the same as in 1954.

Barley stocks in all storage positions on January 1 of 290 million bushels were second largest of record for the date--exceeded only by last year's holdings. Farm stocks of 160 million bushels were about a sixth smaller than a year earlier; stocks in interior mills, elevators, and warehouses at 88 million bushels were nearly equal to last year's; and stocks in other positions were considerably larger. Almost a third of all barley stocks were under loan to or owned by CCC, about the same percentage as a year earlier. Disappearance of barley at about 104 million bushels in the October - December quarter was slightly larger than in the same period of 1955.

Sorghum grain stocks in all storage positions on January 1 are estimated at 204 million bushels - 10 percent below the record stocks of 226 million bushels a year earlier but the third largest for the date. Stocks in Texas were over two-thirds the U.S. total. Stocks on farms at 59 million bushels were about 13 million bushels under a year ago and stocks in terminals at 28 million bushels declined 10 million bushels. Holdings in interior mills, elevators, and warehouses at 117 million bushels were nearly the same as a year earlier. About 45 percent of the January 1 stocks were owned by or under loan to the CCC compared with 55 percent on January 1, 1956. From the October 1 supply of 286 million bushels, disappearance during the October - December quarter is indicated at 82 million bushels compared with 91 million bushels the same quarter a year earlier.

Stocks of soybeans in all storage positions on January 1 amount to 330.3 million bushels. This is the highest of record for the date and compares with 274.8 million bushels on January 1 last year, the previous high. Farm and interior mill, elevator, and warehouse stocks account for all of the increase. Stocks at terminals and in processing plants are both less than a year earlier.

From an estimated supply of 459.6 million bushels (carry-over October 1 of 3.7 million bushels plus 1956 production of 455.9 million bushels) a disappearance of 129.3 million bushels for the October to December quarter is indicated

Continued on page 8.

1/ Estimates of the Crop Reporting Board.

2/ Commercial stocks reported by Grain Division, AMS, at 46 Terminal cities.

3/ Owned by CCC and stored in bins or other storages owned or controlled by CCC, also CCC-owned grain in transit; other CCC-owned grain is included in the estimates by positions.

4/ Firms reporting to the Bureau of the Census, on millings and stocks of flour.

5/ All off-farm storages not otherwise designated.

6/ 1948-55 average.

\*Other States and unallocated - to avoid disclosing individual operations.

1/ Includes stocks at Interior Mills, Elevators and Warehouses, commercial stocks reported by Grain Division, AMS, at terminals, and those owned by Commodity Credit Corporation which are in transit, in bins and other storages under CCC control.

2/ Off-farm total plus farm stocks.

by January 1 stocks. Known use for the quarter includes 81.5 million bushels processed for oil and nearly 37 million bushels exported. In addition, significant quantities of the 1956 crop were processed and some were exported before October 1. During the quarter, feed and other uses also accounted for some disappearance. After allowing for uses of the 1956 crop before October 1, the disappearance indicated from stocks is in relatively close balance with the known disappearance,

Stocks of flaxseed in all storage positions on January 1 totaled 39.5 million bushels. This compares with 34.9 million a year earlier and the 1948-55 average of 33.8 million. Farm stocks estimated at 22 million bushels account for the increase in total stocks over last January 1, since the off-farm stocks at 17.5 million bushels are slightly below those of January 1, 1956.

Current stocks indicate a disappearance during the half-year -- July-December--of 13.4 million bushels from the supply of 52.8 million bushels (carry-over of 4.1 million plus 1956 production of 48.7 million bushels). During the period, crushings amounted to 14.4 million bushels while exports accounted for 2 million bushels. This indicates a disappearance of 16.4 million bushels. The reason for the difference between indicated and known disappearance is not now apparent, but may be due in part to duplication in stocks reported for various storage segments or to errors in estimates of production or farm stocks. In the past, most such discrepancies have cleared up as the season progressed.

These totals are assembled by the Crop Reporting Board, bringing together commercial stocks at terminals as reported by the Grain Division of the Agricultural Marketing Service; stocks of soybeans at processing plants as reported by the Census Bureau; grains reported by the Grain Branch of the Commodity Stabilization Service as owned by Commodity Credit Corporation and stored in bins, ships, and other storages under CCC control and in transit; estimates of the Crop Reporting Board for stocks on farms and at merchant mills and interior mills, elevators, and warehouses.
